

12-POINT AI APP FAST TEST

Answer Pass, Fail, or Unknown. Unknown counts as risk until verified.

#	Control	Pass	Fail	Unknown
1	Can one user retrieve or change another user's data?	■	■	■
2	Have anonymous and direct API access been tested?	■	■	■
3	Are any secrets present in source, history, logs, prompts, screenshots, or browser bundles?	■	■	■
4	Are mock, demo, static, and fallback responses fully identified?	■	■	■
5	Can a failed dependency produce apparent success?	■	■	■
6	Are core working features protected by regression tests?	■	■	■
7	Can the last known-good version be restored quickly?	■	■	■
8	Are database and storage policies tested using normal user credentials?	■	■	■
9	Does the coding agent have explicit limits and protected files?	■	■	■
10	Are destructive and high-impact actions gated by approval?	■	■	■
11	Does the release have evidence for every acceptance criterion?	■	■	■
12	Has the deployed environment been tested from a clean account and session?	■	■	■

Interpretation

Result	Action
0 Fail/Unknown	Proceed to the full scorecard; this fast test is not a launch approval.
1–2	Material review is required before launch.
3–5	High launch risk. Resolve the failed and unknown controls.
6+	Stop. Establish project controls before public use.

Critical override: A score never compensates for exposed data, missing authorization, leaked secrets, invented success, or no recovery path.

This is a general engineering control tool, not a security guarantee, certification, legal opinion, or penetration test.
